PROBLEM SET 1

ANALYSIS II

Problem 1. Consider f(x) = 1/x over the interval [1, 4]. Let P be the partition consisting of the points $\{1, \frac{3}{2}, 2, 4\}$.

- (a) Compute L(f, P), U(f, P), and U(f, P) L(f, P).
- (b) What happens to the value of U(f,P) L(f,P) when we add the point 3 to the partition?
- (c) Find a partition P' of [1,4] for which $U(f,P')-L(f,P')<\frac{2}{5}$.

Problem 2. Suppose f_n is an integrable function on [a,b] for each natural number n. If $(f_n) \to f$ uniformly on [a,b], prove that f is also integrable on this set. (We will see that this conclusion can fail to hold if convergence is merely pointwise.)

Problem 3. Let $f:[a,b] \to \mathbb{R}$ be monotone increasing on the set [a,b]. Show that f is integrable on [a,b].
